At EDSFair, Blue Pearl Demos FPGA Design Tools for RTL Signoff, Presents on Overcoming Timing Challenges

Who
Blue Pearl Software, the provider of EDA software that accelerates RTL signoff for FPGA designs

What
Demonstrations of the newest version of the Blue Pearl Software Suite at EDSFair and a presentation on Overcoming the Timing Challenges of Advanced FPGA Designs

When/Where
Presentation
11:00 to 11:45, November 15
EG-1

Demonstrations
November 15 and 16
Booth D-45

Pacifico
Yokohama, Japan

About the Blue Pearl Software Suite for FPGA RTL Signoff
The Blue Pearl Software Suite works with the Xilinx Vivado Design Suite running on Windows platforms. It includes linting, CDC analysis and automatic SDC generation. Its generated SDCs drive the efficiency of the synthesis and place and route phases of FPGA design implementation, and reduce iterations and overall design time. Its Visual Verification Environment™ makes it easy to use.

The company’s collaboration with Synopsys offers an optimized flow that works with Synopsys’ Synplify Pro FPGA synthesis software. Verilog, VHDL and SystemVerilog designers can automatically generate an exhaustive set of constraints that address false and multi-cycle paths that are compatible with Synopsys’ synthesis flow.

About Blue Pearl Software
Blue Pearl Software, Inc. is a member of the ARM Connected Community, and provides EDA software that accelerates RTL signoff for FPGA designs. The Blue Pearl Software Suite checks RTL designs for functional errors and automatically generates comprehensive and accurate Synopsys Design Constraints (SDCs) to improve Quality of Results (QoR) and reduce design risks.

Press Contact:
Acronyms
CDC: Clock Domain Crossing
EDA: Electronic Design Automation
FPGA: Field Programmable Gate Array
QoR: Quality of Results
RTL: Register Transfer Level
SDC: Synopsys Design Constraints
SoC: System-on-Chip
